Career objective

Successfully executed complex assignments under mentorship.

A ReactJS developer builds and manages websites or apps using React, a JavaScript library. They create and maintain user interfaces, making sure everything works smoothly and looks good. They need to know JavaScript, HTML, and CSS well.

Skills

Proficient HTML5, CSS3, SCSS, JavaScript, React Js, Redux, Material UI, Bootstrap5, Git, GitHub.

Familiar Node Js, Express Js, MongoDB, Sql, MYSQL, DBMS, RDBMS.

General Postman, npm (Node Package Manager), Visual Studio Code (VS Code).

Projects

Bollywood Style

- Frontend development by using React js.
- Managing application level state by using useState and useEffect hooks and use filter and map function to render Api data in app which is in array of object form.
- Redux perform main role in this project. Because many state and props are using that so that's why I can use redux on my project to handle or fixed the props drilling process.
- Implementation of connectivity with API services by using Axios library.
- I have successfully integrated APIs to create seamless user experiences that surpass expectations.
- Used technologies : ReactJS, JavaScript, Redux, MongoDB,.
